

# Novi Woods Montessori

June 6, 2019

Parents:

Mosquito Joe's is a mosquito-control company that services our school to protect the children from mosquito bites. We have them spray about every 3 weeks and they always do it on a Saturday when children are not present. In addition to providing you the schedule below, you will also receive an email on the Thursday prior to spraying.

The barrier spray provides a safe environment for outdoor activity and mosquito control allows continued enjoyment during warm weather months.

All of the barrier spray chemicals Mosquito Joe's uses are synthetic forms of pyrethrins called pyrethroids. Pyrethrins are insecticides that are derived from a naturally occurring compound called pyrethrum found in the chrysanthemum flower. Pyrethroids are used in numerous commercial products that consumers use to control insects such as household pest insecticides, pet shampoos and sprays, and even lice shampoos applied directly to the scalp.

## Novi Woods Montessori's Mosquito spray schedule:
